SECTION 3 – OUTFALL 001A EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

Effluent Compliance Point: at the end of the treatment process prior to discharge to the Akutan Harbor

Effluent Parameter	Units ^a	Average Monthly	Average Weekly	Maximum Daily	Minimum Daily	Sample Location	Sample Frequency	Sample Type
Total Discharge Flow	gpd	N/A	N/A	157,500	N/A	Effluent	daily (5/week)	Measured

Enterococci	cfu/ 100 mL	35	N/A	130	N/A	Effluent	1/month ^h	Grab

Footnotes:

- Units: gpd = gallons per day, mg/L = milligrams per liter, lbs/day = pounds per day, S.U. = standard units, °C= degrees Celsius, FC/100 mL = Fecal Coliform per 100 milliliters, cfu/100 mL = colony forming units per 100 milliliters, µg/L = micrograms per liter.
- Monitoring for TRC is not required if chlorine is not used as a disinfectant or introduced elsewhere in the treatment process.
- lbs/day = concentration (mg/L) x [flow (gpd)/1,000,000] x 8.34 (conversion factor)
- See Appendix C for a definition.
- Minimum % Removal = [(monthly average influent concentration in mg/L - monthly average effluent concentration in mg/L) / (monthly average influent concentration in mg/L)] x 100. The monthly average percent removal must be calculated using the arithmetic mean of the influent value and the arithmetic mean of the effluent value for that month. Influent and effluent samples must be taken over approximately the same time period.
- Limits apply to effluent. Report average monthly influent concentration. Influent and effluent composite samples shall be collected during the same 24 hour period.
- For more than one sample, FC and enterococci average results must be reported as the geometric mean. When calculating the geometric mean, replace all results of zero, 0, with a one, 1. The geometric mean of “n” quantities is the “nth” root of the quantities. For example, the geometric mean of 100, 200, and 300 is $(100 \times 200 \times 300)^{1/3} = 181.7$
- One sample shall be collected each month, May through September, on the same day as a fecal coliform sample is collected.

SECTION 4 – MIXING ZONE AUTHORIZATION

Mixing Zone Authorization: A mixing zone is authorized for fecal coliform, enterococci bacteria, temperature, total residual chlorine, and dissolved oxygen.

The mixing zone size is defined as the area within a rectangle having a length of 30 meters and a width of 2 meters, centered on the end of the outfall pipe and extending from the seafloor to the surface

SECTION 5 – Electronic Reporting (E-Reporting) Rule for Discharge Monitoring Reports (DMR)

The permittee must submit DMR data electronically through NetDMR per Phase I of the E-Reporting Rule (40 CFR 127) upon the effective date of the Permit. Authorized persons may access permit information by logging into the NetDMR Portal (<https://cdxnodengn.epa.gov/oeca-netdmr-web/action/login>). DMRs submitted in compliance with the E-Reporting Rule are not required to be submitted as described in Appendix A – Standard Conditions unless requested or approved by the Department. Any DMR data required by the Permit that cannot be reported in a NetDMR field (e.g. mixing zone receiving water data, etc...), shall be included as an attachment to the NetDMR submittal. DEC has established an e-Reporting Information website at

<http://dec.alaska.gov/water/compliance/electronic-reporting-rule> that contains general information about this new reporting format. Training materials and webinars for NetDMR can be found at https://usepa.servicenowservices.com/oeca_icis?id=netdmr_homepage.
